

Pavement Management Program

DRAFT Report

**Town of Maynard,
Massachusetts**

August, 2014

Town of Maynard, Massachusetts

Pavement Management Program

DRAFT

Inventory and Inspection Reports Table of Contents

1. Roadway Ownership and Acceptance Reports

- Roadway Ownership and Acceptance Summary

Roadway Ownership and Acceptance Map (11x17)

2. Repair Bands & Backlog

- Pavement Repair Methods and Unit Pricing
- Repair Method Descriptions
- Backlog Summary Accepted Streets
- Backlog Summary Unaccepted Streets
- Backlog Summary Private Streets
- Backlog Summary By Functional Classification

Roadway Inventory and Suggested Repair Map (11x17)

3. Segment-Based Road Surface Rating (RSR) Report

- Accepted Streets Sorted By Name and Segmentation With Average Ratings
- Unaccepted Streets Sorted By Name and Segmentation With Average Ratings
- Private Streets Sorted By Name and Segmentation With Average Ratings

4. Overall Road Surface Rating (RSR) Reports

- Average RSR and Repair Method, Sorted By Street
- Average RSR and Repair Method, Sorted By RSR
- Average RSR and Repair Method, Sorted By Functional Class

5. Capital Planning

- Average RSR and Repair Method, Sorted By Cost Benefit Value
- Streets Sorted By Cost Benefit Value with Cumulative Total
- Streets Sorted By Cost Benefit Value Average with Cumulative Total

Pavement Management Program

Pavement Repair Methods and Banding

Repair Method	Low Range	High Range	Unit Cost Sq.Yrd.
Reconstruction			\$38.00
Reclamation	0	50	\$24.00
Mill and Overlay	50	70	\$12.00
Surface Treatment	70	80	\$6.00
Crack Seal	80	92	\$0.50
Defer Maintenance	92	101	\$0.00
Reclaim With Sidewalk			\$70.00
Reclaim With Drainage			\$70.00
Reclaim With Sidewalks and Drainage			\$100.00
Level and Overlay 1-1.5			\$17.50
Hot In Place With Surface Treatment			\$10.50
Micro Seal - Single With Crack Seal			\$3.60
Micro Seal - Double With Crack Seal			\$5.40
Single Chip Seal			\$2.70
Double Chip Seal			\$5.00

Town of Maynard, Massachusetts

Pavement Management Program

Pavement Repair Method Descriptions

Longevity	Appearance	Description	Materials Used	Depth of Coating
Crack Seal				
2-5 Years	Some Imperfections	A process which involves clearing cracks of dirt and debris then filling the cracks with a highly elastic material (usually a hot pour highly polymer modified asphalt). Crack sealing prevents moisture from accessing the pavement structure and causing further deterioration to the roadway.	Asphalt and Fibers	N/A
Chip Seal				
4-8 Years	Coarse Surface	Thin Layer of Crushed Aggregate Spread Across Roadway Surface. A Second Layer is Applied in a Double Chip Seal	Asphalt, Chipped Rock, Mineral Aggregate	0.5" to 1"
Micro Seal				
4-8 Years	Smooth Surface	Thin Asphalt Mineral Aggregate Applied to Rutfilling and/or Surfacing of Existing Paved Surfaces. A second layer can be applied in what is called a "Double Lift". Some prefer to crack seal before applying this treatment.	Asphalt, Chipped Rock, Mineral Aggregate	.05" to 1"
Cape Seal				
4-8 Years	Smooth Surface	A treatment involving a combination of Chip Seal and Micro Seal. A Chip Seal is applied first and a Micro Seal is applied over the Chip Seal. This treatment benefits from both the Chip Seal (flexibility) and the Micro Seal (smooth surface).	Asphalt, Chipped Rock, Mineral Aggregate	1" to 2"
Level and Overlay				
6-10 Years	Smooth Surface	Top Layer Leveled Off (Ruts and Cracks) to Create Smooth Base. Overlaid with New Surface Course with Tack Coating	Asphalt, Crushed Rock and Sand	0.5"-1" Level Course, 1.5"-2" Top

Longevity	Appearance	Description	Materials Used	Depth of Coating
Hot In Place				
6-10 Years	Smooth Surface	Top Layer is removed after it is softened with radiant convection heat. Additives are blended with the Asphalt, which is placed and rolled while still hot. Preferred candidate for this treatment is a straight roadway with minimal tree canopy. An overlay is preferred to preserve this treatment.	Asphalt, Asphalt Emulsion Additives	Up to 2"
Mill and Overlay				
8 - 15 Years	Smooth Surface	The process of removing the top layer of bituminous pavement of a roadway by grinding with a large milling machine to a specified depth (1.5 inches typical) followed by the placement of a new layer of bituminous pavement.	Asphalt, Crushed Rock and Sand	1.5" Mill, 1.5" Top
Reclamation				
15-25 Years	Smooth Surface	Full thickness of the asphalt pavement and a predetermined portion of the underlying material is uniformly pulverized and blended to provide an upgraded base material. Additives such as emulsified asphalt or stabilizers can be introduced to strengthen the material. The material is shaped and compacted with a surface or wearing course being applied to complete the process.	Asphalt, Crushed Rock and Sand	3" Binder, 2" Top
Reconstruction				
15-25 Years	Smooth Surface	Remove existing asphalt and base course to completely rebuild the roadway.	Asphalt, Crushed Rock and Sand	3" Binder, 2" Top
